The Supply Chain Management System has helped the company in many ways. It helped to reduce time consuming operations that previously needed to be done by a dedicated employee. Also it has helped the company in making more cost effective orders as well as keep the shelves stocked with products.

First of all the software has helped us increase profit by making the orders from abroad more cost effective. Before the software the company's stock manager would have to figure out what products were lacking and make orders accordingly. Now with the new software this time consuming operation has been reduced. It however saves more than just time as the software is better at ordering products in a way that when a new order needs to be made it will be filled with as many products as possible and in a way that all products bought from a specific supplier will run out at around the same time. Thus reducing the overall number of orders that need to be made within a certain time period.

Another great feature are the transfers. Before the software at the end of every week a number of products would be moved between the warehouses and stores. This however was never ideal as in many occasions there were not enough products at the stores and mid-week transfers had to be made. Now with this software not only have we saved time as the stock manager wouldn't have to go through around 10000 different products but it also help reduce or entirely avoid mid-week transfers.

Overall the software is very helpful and has matched the expectations. It is simple with few tabs making it easy to use by employees with little computer experience.
